

Addabound

Resin bound surfacing with added recycled content

Addabound Resin Bound surfacing has been developed due to customer demand to include a minimum of 25% recycled content of aggregate and filler.

The attractive and all new Addabound range of decorative porous surfacing incorporates our latest UV stable resin technology, offering increased renewable resin content, strength and improved surface flexibility.

Stormwater Runoff

Addabound is porous, allowing water to permeate/percolate through the surface and beyond when a suitable base build-up configured for Stormwater Runoff has been installed.

Where is Addabound used?

- Driveways
- Footpaths
- Pedestrian Precincts
- Playgrounds
- Car Parks
- Access Roads
