

# Addaprint DS

## Resin bound imprinted decorative surfacing

Addaprint Resin Bound surfacing system provides an attractive, hardwearing, low maintenance surface utilizing natural aggregate. The surface is a smooth, hand trowelled finish with no loose aggregate and is ADA compliant.

Addaprint is a cold applied, UV stable bound paving system. Addaprint is used to create highly visible, decorative crosswalks which are regulated by the FHWA as to colors and imprinted patterns. Placement can be accomplished by milling entire area to receive Addaprint to 5/8" depth or we recommend notching edge to 5/8" depth over 1' as this manor of installation does not have any detrimental effect to existing pavement and the transition is so minimal vehicles utilizing the roadway will not notice any difference from the surrounding pavement.

### Benefits

- Long lived
- Aesthetically pleasing
- UV stable
- Durable
- Low maintenance
- Able to be placed over asphalt or concrete
